Tables exercises (1-12)

1. Table vs layout?

1/1 point (graded)

Why shouldn't tables be used for layout?
(select all that apply - 2 correct answers!)

- ☐ Though tables were initially designed for layout, the new specification encourages it only for tabular data
- ☒ Tables are not screen reader friendly
- ☐ Tables take a long time to create
- ☐ Tables are harder to style
- ☒ Redesigning your page is harder

2. I'm first!

1/1 point (graded)

Which one of these open tags should come before the others in a table element?
(`<table>`)?

☐ `th`

☒ tr ✓☐ td☐ tc

You have used 1 of 2 attempts

3. Organization

0/1 point (graded)

How are HTML5 elements of a table organized?

☐ A figure contains a table which contains data cells☒ A table contains rows and each row contains data cells ✓☒ A table contains a div which contains rows or columns ✗☐ A table contains columns and each column contains rows

Explanation

In HTML5, rows are specified and cells in each row correspond to columns.

? Hint (1 of 1): Which comes first? Rows or columns?

You have used 2 of 2 attempts

i Answers are displayed within the problem

4. Size matters

0/1 point (graded)

True or False? Every data cell in a table will be the same size (same height and width).

☐ False ✓

☒ True ✗

Explanation

Different cells can be different widths and heights, depending on content and CSS styling.

? Hint (1 of 1): How is cell size determined?

5. Same?

1/1 point (graded)

True or False? `<th>` is just a shorter way to write `<thead>`

☒ False ✓

☐ True

Submit

You have used 1 of 1 attempt

6. Order is important

1/1 point (graded)

Which of these is the correct order of elements in a table?

☐ `<tr>` goes inside `<th>`

☐ `<thead>` goes inside `<th>`

☒ `<th>` goes inside `<tr>` ✓

☐ `<thead>` goes inside `<tr>`

Submit

You have used 1 of 2 attempts

7. Table title

1/1 point (graded)

Which tag do you use to give your table a title?

☐ `<thead>...</thead>`

☒ `<caption>...</caption>` ✓

☐ `<table>...</table>`

☐ `<title>...</title>`

Submit

You have used 1 of 2 attempts

8. Using 'span'

1/1 point (graded)

What is the `span` attribute in 'colgroup' and 'col' elements used for?

- ☐ Indicates that any styles applied to the elements will be applied to the rest of the table
- ☐ To specify the number of rows you want the cell element to span or cover
- ☒ To specify the number of columns you want the colgroup or col element to span or cover ✓
- ☐ To specify that the column will be a header column

Submit

You have used 1 of 2 attempts

9. Table split

1/1 point (graded)

Why should you split your table into header, body and footer using the `thead`, `tbody` and `tfoot` elements?

(check all that apply - 2 correct answers!)

- ☒ Header, body and footer rows can be styled individually
- ☐ Browser needs to know header, body and footer of a table to display a table correctly
- ☒ Body can be scrolled independently of header and footer
- ☐ You cannot use `<th>` without `<thead>`

Submit

You have used 1 of 3 attempts

10. 'th' tag

1/1 point (graded)

By default, contents of the `<th>` tag are displayed as?

☐ regular and center aligned

☐ regular and left aligned

☒ bold and center aligned ✓

☐ bold and left aligned

Submit

You have used 1 of 2 attempts

11. Header and data cells

0/1 point (graded)

```
<tr>
  <th>Name</th>
  <th>Age</th>
  <td>Alice</td>
  <td>15</td>
</tr>
```

True or False? The `<th>` and `<td>` tags can be used in the same row. (Refer to code above)

☒ False ✗

☐ True

Submit

You have used 1 of 1 attempt

12. Border-Collapse

1/1 point (graded)

Why is the CSS 'border-collapse' property used in tables?

- ☐ There is no such CSS property
- ☐ They were specifically created to allow tables to have double borders
- ☐ For multiple tables to share borders with each other
- ☒ If table and cells have individual borders, they can be kept separate or combined into one border between them ✓
