Activities - Multimedia and discussion

Activities - Multimedia

1. Embed an audio file in an HTML page with the following requirements:
 - Player has controls to play, pause, seek, etc.
 - Audio must automatically start playing when page loads
 - Audio must be muted when playback begins
2. Create an HTML audio player that plays an audio file of your choice in Google Chrome, Internet Explorer and Mozilla Firefox. Use multiple sources if you have to.
3. Create an HTML video player that plays a video file of your choice in Google Chrome, Internet Explorer and Mozilla Firefox. Use multiple sources if you have to.
4. Create a WebVTT file for [this video](#). Then embed this video in an HTML page with the captions you created.

Note 1: If you wish to share your HTML code in the discussions, you can paste your code directly in a discussion forum post (highlight code and Ctrl+K/use the code widget) or use one of the following online code editors:

- JS Bin: <http://jsbin.com> (JS Bin tutorial)
- CodePen: <http://codepen.io> (CodePen tutorial)

These are HTML, CSS, and JavaScript code editors that preview/showcase your code bits in your browser. It helps with cross-device testing, realtime remote pair programming.

Note 2: If you miss the "pizza cats" video already, don't worry! This video is extensively used in the next HTML5 courses: [HTML5 Coding Essentials](#) and [Best Practices](#) and [HTML5 Apps and Games](#) ;)
