## Recipe project - Module 1 and discussion

### Recipe project - Module 1

Throughout the course, we'll be building a simple project, adding to it with what we've learned in each module. This project will be a simple Web application that will allow you to browse different recipes.

For now, we'll start off with a simple first draft using just what we've learned about HTML5 using tags we've covered. We want to have the following components:

- A large title for the app, something like "My Favorite Recipes", or whatever you'd like to call it.
- A description of a recipe, just some plain text explaining what the recipe is and any other pertinent information.
- A set of steps to follow, numbered in order.

Please start with this "empty page" in CopePen:

HTML

EDIT ON

LIVE

```
1 <!DOCTYPE html>
2 <html lang="en">
3
4 <head>
5   <meta charset="UTF-8">
6   <title>My favorite Recipes</title>
7 </head>
8   <body>
9
10  </body>
11 </html>
```

... and write the correct markup in order to get this result:

HTML

EDIT ON

# My Favorite Recipes

- Recipe 1

## Recipe 1

This is going to be my favorite recipe.

### List of Ingredients:

If you want to share an actual work/recipe in the discussion forum, please either copy-paste your lines of code into a JSBin or a CodePen project, or write your HTML5 code directly into one of these online tools.
