Activities - Embedding content and discussion (OPTIONAL)

Activities - Embedding content (OPTIONAL)

1. How can you inform screen readers that you are using an iframe in your Web page since iframes have poor accessibility?
2. Try the following code in your HTML editor:

```
1. <iframe src="http://facebook.com">
2.   <p>Your browser does not support iframes.</p>
3. </iframe>
```

What happens? Why does it behave the way it does?

Please post your observations and findings in the discussion below.
