Internationalization resources
Web internationalization - further reading (not mandatory)

This page lists links to resources available from the W3C Internationalization Activity site that will help you author HTML and CSS for internationalization.

Declaring the character encoding

- Character encodings for beginners: What is a character encoding, and why should I care?

- Handling character encodings in HTML and CSS: Articles that help you understand the essentials for characters and character encodings.

Declaring the language of content

- Language on the Web: An overview of language topics for newcomers to HTML authoring.

- Language tags in HTML and XML: A simple overview of the syntax for language tags in BCP 47.

- Setting language preferences in a browser: How do I use the language settings of my browser to specify the language in which a server should send me pages?

- Choosing a Language Tag: Which language tag is right for me? How do I choose language and other subtags?

Other HTML internationalization topics

- <u>Internationalization Techniques, Authoring HTML & CSS</u>: Links from this page help you find information about many other important ways to write HTML that works for an international audience.
